Work experience

Fullstack Product Engineer
part-time: Oct 2025 - Present

Folkæt ApS

Driving full-stack product development from concept to delivery. Elevating UX and performance in our React frontend, while building and operating a scalable, resilient cloud-native backend with Flask and PostgreSQL. Translating product goals into clear scope, influencing direction, and aligning the team around focused, high-impact iterations.

Skills: React, Flask (Python), PostgreSQL, Cloud computing, Tailwind, GitOps (CI/CD), UI/UX, SW architecture

Junior Web Developer
student job: Nov 2023 – Apr 2025

Intelligent Banker ApS

Full-stack development of all fintech projects - both for customers and in-house solutions. Helping with creating and extending visual identities, optimizing user experience, implementing external APIs and finding ways of collecting additional business intelligence data. Applying clean code principles to remove technical debt and refactor legacy systems.

Skills: Nuxt (Vue), Node.js, AWS (Lambda, CloudFront, S3, Redshift), Tailwind, GitOps (CI/CD), UI/UX, REST API

Front-end Developer
student job: Aug 2020 - Nov 2021

Adalo Solutions, Ltd.

In the begining I started out as a frontend developer whose job was creating websites using HTML and CSS libraries, coding and testing newsletters (MJML). Part of my job was also being an administrator to a medical education platform euni.cz (WP). Later I was responsible for creation of customized backend wordpress plugins for customers (PHP).

Skills: PHP, WordPress, MJML, CSS, HTML, Linux

Education

MSc in Software Engineering
Sep 2023 - Jun 2025

Faculty of Engineering, University of Southern Denmark

Main focus on Big Data (Real-Time Bitcoin Price Prediction based on Sentiment Analysis), Software Architecture, AI and low-code development (DSL-Driven IoT Enviromental Monitoring), robotics (Stress-Adaptive Collaborative Robots) and code quality (Clean code and technical debt internship). In my thesis I focused on DevOps and SW Architecture transformation of Nabogo (carpooling startup) where we focused on scalability and observability. Graduated with overall GPA 10.56 (ECTS B).

Skills: Kubernetes, Apache (Kafka, Spark, HDFS), NoSQL, Python, Java, Clean Code, Cloud architecture

BSc in Information Technology
Sep 2020-Jun 2023

Faculty of Information Technology, Brno University of Technology

Main focus on key IT principles such as hardware, algorithms, databases, networks, simulations, formal languages and more. Some of the selected projects include Suez Canal Blokage Simulation, Carpooling System, DNS Tunelling, and Deep Focus iOS App. In my thesis, I worked on a Smart City IoT Platform (Angular) in cooperation with a company Logimic. Received a one-off scholarship for top 500 high school graduates.

Skills: C/C++, C#, PHP (Laravel), JS/TS (Angular), MySQL, Swift, Python, UML, Figma, Adobe CC

Skills & Interests

Languages
TypeScript, Python, HTML, CSS, C/C++, C#, PHP, SQL, Swift, Bash

Technologies
Vue, Nuxt, React, Angular, Laravel, Tailwind, Flask, AWS (Lambda, S3, EKS, ...), REST API, Node.js, Playwright, Vitest, PHPUnit, MySQL, PostgreSQL, MongoDB, Docker/Kubernetes, GitHub Actions, Grafana, Prometheus

Interests
Travelling and Camping, Skiing, Badminton, Running, Bass Guitar, Cars, Movies and Series
